

INBO for Open Access

Bart Goossens; Peter Desmet
Research Institute for Nature and Forest (INBO)
Brussels, Belgium

Since September 20, 2017 the Research Institute for Nature and Forest (INBO) aims to publish all its scientific articles as Open Access (OA). The INBO will promote publication in **open access journals** (where articles are immediately available for free) and deposit other articles after a maximum of 2 years via **green open access** in INBO's institutional repository (<https://pureportal.inbo.be/portal/nl>).

Researchers at the INBO traditionally publish in leading online journals that require potential readers to pay to get access (either by subscription or one-time purchase). The INBO will continue to allow researchers to do so, on the condition that these subscription-based journals allow green open access of the peer reviewed article (i.e. the post-print at minimum) after a maximum embargo of 2 years. The reason we decided to include the green OA option is because OA journals are not yet available for all areas with the same reputation as traditional journals.

The INBO will encourage its researchers however to publish in OA journals included in the Directory of Open Access Journals ([DOAJ](#)) and under a Creative Commons Attribution ([CC-BY](#)) license. This form of golden OA makes articles immediately available for everyone upon publication. The INBO will support the Article Processing Charges (APC) associated with publishing in OA journals.

Subscription-based journals usually also offer the option to publish the article as OA. This hybrid OA option usually comes with high APC and is a source of income in addition to the subscriptions and charges readers still have to pay for the other articles in the journal. The INBO OA policy will no longer support this form of hybrid OA, but rather invest its OA budget in full OA journals.

Tip: Do you often hit the paywall when looking for scientific articles? The Chrome extension [Unpaywall](#) will find the legal post-print for you.
